

Target Area: Interpersonal Psychosocial and Social Skills

<p>Braunling–McMorrow, Lloyd & Fralish (1986) <i>Journal of Rehabilitation</i> 52(1): 39–44</p>	<p>SCED score – <i>to be confirmed</i></p>
<p>Method/Results:</p>	<p>Rehabilitation Program</p>
<p>Design:</p> <ul style="list-style-type: none"> ➤ Study Type: SSD. AB design (A=baseline; B=treatment), with measures of generalisation at pretest and follow up. ➤ Participants: 3 young adults (age 18 years, age 20 years, age 27 years) with severe, chronic TBI. ➤ Setting: Rehabilitation Centre for head-injured adults. <p>Target behaviour measure/s:</p> <ul style="list-style-type: none"> ➤ Correct responses (as both “actor” and “reactor”) to challenges posed in a “social skills” card game including: “compliments”, “social interaction”, “politeness” “criticism”, “social confrontation” and “question/answers”. <p>Primary outcome measure/s:</p> <ul style="list-style-type: none"> ➤ Videotaped interactions during meal times transcribed and scored for adequacy of same behaviours as above. ➤ House staff rated residents pre and post treatment on 15 behaviours (similar to above) on 5 point likert scale. <p>Results: Suggest that participants improved on all measures (no statistical verification).</p>	<p>Aim: To teach social skills to people with TBI.</p> <p>Materials: A revised version of the social skills training program “Stacking the Deck” (Foxy & McMorrow, 1983), i.e. a game where players move 4 coloured pieces around a board to home. Number of spaces moved each turn defined by one of 48 cards. Each card requires player to verbally respond to one of 6 skill areas (8 examples of each) (see Primary outcome measures) before moving. Video camera also required.</p> <p>Treatment plan:</p> <ul style="list-style-type: none"> ➤ Duration: 16 games. ➤ Procedure: Each game approx 30–60 minutes played 2–3 times per week. ➤ Content: Player only allowed to move (around board) if responded correctly to social skills challenge. If incorrect response, correct response was demonstrated.
